

ACCESS CONTROL & PROFILE LOCKOUT MODULE

Eliminate unapproved overtime & designate areas for authorized personnel only

- Define the exact time interval employees can enter a punch.
- Lock out or warn employees who try to clock in or out when they are not scheduled, including those who are tardy or early.
- Control admittance to secure areas of your company and lock out unauthorized personnel, including limiting employee access to all areas of your operation to specific areas only.
- Require your employees to punch according to company policies.
- Greet your employees with a friendly message.
- Activate any type of relay activated device, doors, gates, lights and more.
- Receive alerts if a door is left open or when a door closes.

Manage employee entry into controlled areas and prevent unauthorized admittance of non-employees. The access control software lets managers control who will be allowed to use designated entryways, and when. Access control provides greater control of employee movements by restricting entrance outside work schedules. The system even tracks employees that tried to gain access but were denied. In addition, a facility's doors can be scheduled to lock and unlock at designated times, so all personnel can pass at will.

Access Control & Profile Lockout Module can be on-line with the data collection terminals to provide alerts within seconds of an unauthorized event. Manager and security personnel can be automatically alerted via system pop-ups text messages and email. The system's security dashboard provides a convenient, simple-to-use monitoring screen for security personnel. The monitoring screen displays all entry and exits as they occur and immediately alerts guards if a door is left open or unauthorized personnel tried to gain access. In addition to real-time data, the software generates a variety of reports, which can help managers identify patterns, see which personnel have accessed specific entry ways at specific times, and trace the movement of guards and tours throughout the facility.

Secure your business with the Access Control & Profile Lockout Module.
