

# PC CLOCK MODULE

## Access a time clock from anywhere on your network for online operation with desktop convenience

- Eliminates the unavoidable errors associated with manual data collection.
- Easy to operate (use programmable) and install.
- Runs on your existing network.
- Additional features available (employees messaging, data input validation).
- Read-time operation syncs with TA100 PRO/SQL or GENESIS PRO/SQL database.

The PC Clock Module can record employee time, monitor productivity, track quantities (inventory) and more in a multitude of industries, including restaurants, hospitals, health care facilities, banks, law offices, manufacturers, retail, hospitality and more.

It's easy-to-use data interface is accessible on a variety of existing computer networks in your organization to complement the management information systems you already have in place. By automating data collection, errors and manpower are dramatically reduced, thereby reducing payroll costs and errors.

What kind of data would you like to collect? Keeping track of employee time, validating job costing entries, quantities-and more-is easy.

PC Clock uses your time and attendance system database to program the functionality of PC Clock. There are 12 function key definitions available, 0-9 are user-programmable and 2 are hard coded for "IN" and "OUT". The button "Employee Self Review" opens an employee self-service module.

**Harness PC Clock for a cost-effective means to collect data conveniently and effectively.**
